

## Environmental Policy

For **Grupo Piñero** it is very important that our activities are performed within a context of respect for and protection of the environment, since the destinations where we operate hold great environmental and natural riches that we must preserve. We have therefore firmly committed to:

- Continuously improve our infrastructure to **reduce the overall energy consumption** of our companies.
- Establish mechanisms to **optimise the general water management** at all our facilities, in pursuit of reduced consumption, prevention of pollution of water resources and the proper management of waste water, to be treated and reused appropriately.
- Develop a strategy to apply **integrated management to our waste**, fostering reduction, reuse and recycling of waste.
- Plan actions so as properly to **prevent and control pollution** of the soil, water and atmosphere.
- Encourage **awareness-raising among our customers and co-workers** as to the main environmental problems and their role in improving the impact of environmental conservation.
- Participate in actions, programmes and/or projects to **protect and preserve local biodiversity** in those locations where we operate.
- Contribute to **improving our carbon footprint**, reducing emissions of gases from fossil fuels, and fostering the use of renewable resources.
- **Comply with the local, national and international legislation** applicable to our activities.
